EDUCATION

Bachelor in Computer Application

Prime (Tribhuvan University)

Nov 2022 – Present

Higher Secondary Education

NCCS (Tribhuvan University)

July 2019 – Sep 2021

SKILLS

Technical Skills

- React
- TypeScript, JavaScript
- PostgreSQL, typeORM
- Tailwind CSS
- Node, Nest
- SpringBoot

Tools & Platforms

- Git
- VS Code
- Postman
- Vite
- IntelliJ

PROFESSIONAL CERTIFICATION

Joy of React

June 2, 2025

Hackaverse

June 17, 2025

PROFESSIONAL SUMMARY

Dedicated BCA student with hands-on experience in building responsive web applications using React and modern frontend technologies, alongside developing scalable backend solutions with Node, Express and Nest. Skilled in collaborating with teams to deliver efficient and innovative projects.

WORK EXPERIENCE

Full Stack Intern, Fusemachines

Dec 2025 – Mar 2026

- Architected and implemented a responsive Learning Management System (LMS) using React, TypeScript, and Tailwind CSS. Established a consistent design system using CSS tokens for improved maintainability.
- Integrated REST APIs using TanStack Query and implemented secure login/registration with session management (local/SessionStorage).
- Improved performance using lazy loading, fixed UI issues, and contributed to backend authentication and minor Node.js/Nest bug fixes.
- Developed robust data entry systems using React Hook Form and Zod, streamlining complex user onboarding flows while ensuring high data integrity through real-time frontend and backend validation.

PROJECTS

RecipeApp

May 2025 – Jun 2025

- Developed a recipe management application with React and Vite, implementing CRUD functionality to enable seamless recipe creation, updates, and deletion using localStorage for data persistence.
- Integrated the MealDB API to retrieve and display a comprehensive list of meals, enhancing the application's recipe exploration features.
- Implemented automated CI/CD pipelines using GitHub Actions, deploying the application to GitHub Pages, ensuring consistent builds and rapid deployment cycles

Vetayo (Hackathon)

Jun 2025

- Led a team of three to design and implement a Lost & Found reporting interface using MERN with real-time form validation and state management for user input.
- Developed a dynamic listing page to display reported items, integrating Axios for asynchronous data fetching from a backend API.
- Configured React Router to support smooth navigation across multiple pages (e.g., Home, Report Lost, Item List), enhancing UX.
- Built modular and reusable UI components (e.g., Navbar, Item Cards) following component-based architecture and clean design principles.
